4 ↓	5→	↑ ←6
7 ↓	8→	↑ ←9
10 ↓	11→	↑ ←12

Below

00 45 15 30	00 45 15 30	00 45 15 30
↓ = 30	→ =15	↑=00 ← =45

\ /

(: D))---

/. \

(1,7) (2,8) (3,9) (4,10) (5,11) (6,12) ↓ → ↑←	=	(1,7) (2,8) (3,9) (4,10) (5,11) (6,12) 30 15 0045

The rest is for ai

This version is called 45 minute arrow rule this is differnt from the other rule .

If the minutes are **:00 → ↑ 0**

- If the minutes are **:15 → → 15**
- If the minutes are **:30 → ↓ 30**
- If the minutes are **:45 → ← 45**

4

(1:30)=1:30-2:14
(2:15)= 2:15-2:59
(3:00)= 3:00-3:44
(3:45)=3:45-4:29
(4:30)=4:30-5:14
(5:15) =5:15-5:59
(6:00)=6:00-6:44
(6:45)=6:45-7:29
(7:30)=7:30-8:14
(8:15)=8:15-8:59
(9:00)=9:00-9:44
(9:45)=9:45-10:29
(10:30)=10:30-11:14
(11:15)=11:15-11:59
(12:00)=12:00-12:44
(12:45)=12:45-13:29
(13:30)=13:30-14:14
(14:15)=14:15-14:59
(15:00)=15:00-15:44
(15:45)=15:45-16:29
(16:30)=16:30-17:14
(17:15) =17:15-17:59
(18:00)=18:00-18:44
(18:45)=18:45-19:29
(19:30)=19:30-20:14
(20:15)=20:15-20:59
(21:00)=21:00-21:44
(21:45)=21:45-22:29
(22:30)=22:30-23:14
(23:15)=23:15-23:59
(00:00)=00:00-00:44
(00:45)=00:45-01:29
Option

1:30=7:30=13:30=19:30
2:15=8:15=14:15=20:15
3:00=9:00=15:00=21:00

3:45=9:45=15:45=21:45
4:30=10:30=16:30=22:30
5:15=11:15=17:15=23:15
6:00=12:00=18:00=00:00
6:45=12:45=18:45=00:45

8 option is
1:30,2:15,3:00,3:45,4:30,5:15,6:00,6:45

Rember

Only option is

1:30,2:15,3:00,3:45,4:30,5:15,6:00,6:45

import math

Step 1: Find your Time Block

Look at your current real-world time and find which of the 32 time blocks it fits into.

- *Example:* If your clock says **23:08**, it falls into the 22:30–23:14 block.

Step 2: Convert to the Base 8-Option Time

Take the block you found in Step 1 and change it to its matching **8-Option Time** using your conversion rule chart:

- 1:30, 7:30, 13:30, 19:30 → **1:30**
- 2:15, 8:15, 14:15, 20:15 → **2:15**
- 3:00, 9:00, 15:00, 21:00 → **3:00**
- 3:45, 9:45, 15:45, 21:45 → **3:45**
- 4:30, 10:30, 16:30, 22:30 → **4:30**
- 5:15, 11:15, 17:15, 23:15 → **5:15**
- 6:00, 12:00, 18:00, 00:00 → **6:00**
- 6:45, 12:45, 18:45, 00:45 → **6:45**
- *Example:* Since 23:08 sits in the 22:30 block, your Base Option Time is **4:30**.

Step 3: Find the Hour Glyph

Take the hour number from your Base Option Time (1, 2, 3, 4, 5, or 6) and match it to its arrow companion:

- **1 → ↖ 1**
- **2 → ↑ 2**

- **3 → ↗ 3**
- **4 → ↙ 4**
- **5 → ⌊ 5**
- **6 → ↘ 6**
- *Example:* For **4**:30, the hour number is 4, which gives you **↙ 4**.

Step 4: Find the Minute Glyph

Take the minute number from your Base Option Time (:00, :15, :30, or :45) and match it to its special companion rule:

- If the minutes are **:00 → ⎡ 0**
- If the minutes are **:15 → → 15**
- If the minutes are **:30 → ⌊ 30**
- If the minutes are **:45 → ← 45**
- *Example:* For 4:**30**, the minute number is 30, which gives you **⌊ 30**.

Final Result

Put the Hour Glyph and the Minute Glyph side-by-side.

- *Example:* 23:08 becomes **↙ 4 ⌊ 30**

If you want to try testing another timeline sequence, give me **any time of day** and we can trace it together!
